FOR IMMEDIATE RELEASE

DRiWATER EXHIBITS FOR CATA AT CAL POLY

SANTA ROSA, CA – July 17, 2013 – DriWater, worldwide manufacturer of DRiWATER, time-release water, is pleased to announce that due to demand, we are introducing a new test pack for teachers.

DriWater exhibited its time release water technology at the California Agricultural Teachers Association (CATA) held at Cal Poly University. The event was a showcase of products and services that California Ag teachers can use to educate their students. The event was a great forum to show how DriWater is used in the horticulture and agriculture markets where water is precious.

DriWater's slow release reduces water loss to evaporation and leaching so plants can be watered with 10% of the water normally used. The teachers were amazed with the 100% natural gel and felt it would be a good educational tool for their students. Here in the West, water will always be valuable and being able to save 90% will be helpful in the long term.

We had many requests at the show for a test kit that would be available to teachers to educate their students on water conservation technologies. So, The School Test Kit was created. The Kit includes the DriWater and all necessary forms for students to create a complete test. The kits will be available starting July 31st.

DriWater has developed the commercial and retail market for DRiWATER in the United States and is working in more than 30 countries around the world. DRiWATER is making the lives of homeowners, travelers, and vacationers much easier. The product is also turning deserts into forests, growing food where it was never possible, and is conserving one of Earth's most precious resources – water.
